Dear Colleagues,

With the advancement of medical data analytics, the online monitoring and statistical evaluation methods have become vital for the evaluation of treatment effects in gynecological oncology. Well-designed monitoring and statistical evaluation methods can effectively help clinicians assess the treatment effects and prove alert when there are important changes in the risks of patients.

This special issue presents novel approaches on how to effectively evaluate and monitor the risks/treatments effects for patients in gynecological oncology. It will introduce the newest data-driven online monitoring methods in medical quality in gynecology, as well as provide efficient alarm on when deterioration of quality appears. Through presenting an international perspective of current monitoring and assessment methods, research in this stream provides scientists and hospital managers with an overview of the existing data-based tools and techniques available for monitoring and assessing the quality in gynecological oncology.

We are pleased to invite you to submit a manuscript to European Journal of Gynaecological Oncology for peer review and possible publication in a special issue entitled Online Monitoring and Assess Methods in Gynecological Oncology.

Key Words: Online Monitoring; Control Charts; Statistical Evaluation; Prognostic Effect

Submission Deadline: 01 July 2023
Online Submission System: https://js.ejgo.net/ch/author/login.aspx
